

Proposed Solution

ComicCraft - AI Comic Story Creator using Gemini Models

Overview

The user submits a form. Gemini Flash returns a five-panel JSON outline. In parallel, Gemini Pro writes caption and narration while Stable Diffusion draws one image per panel. A layout builder merges text and images, an exporter writes the PDF, and the preview page shows the comic.

Workflow

Key features

- Setting, tone and art-style pickers
- Structured JSON outline using response_mime_type
- Parallel text and image generation
- Lazy, cached Stable Diffusion pipeline with start-up warm-up
- PDF with Unicode fonts
- JSON API and image test endpoint

Differentiators

- End-to-end: idea to PDF in one click
- Runs locally, no image cost
- Configurable models through .env
