

Project Design Phase

Problem – Solution Fit Template

Date	2 October 2026
Team ID	12
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) Who is your customer? I.e. working parents of 0-5 y.o. kids CS - Students, hobbyists and indie writers (13-30) who want a short illustrated story - Teachers and parents who need quick visual stories for lessons or kids - Not artists; no drawing or layout skills	6. CUSTOMER CONSTRAINTS What constraints prevent your customers from taking action or limit their choices of solutions? I.e. spending power, budget, no cash, network connection, available devices. CC - Free Gemini API tier: 5 requests/min, 20 per day per model - Image generation needs a capable laptop or GPU - Little time; no design software or money for an illustrator - Basic web browser is all they have	5. AVAILABLE SOLUTIONS Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? I.e. pen and paper is an alternative to digital notetaking AS - Hire an artist: costly and slow - Manual tools (Canva, Pixton, Storyboard That): templates only, need design effort, no story writing - Chatbots write text but give no panels or PDF - Image generators make single pictures with no story flow	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides. J&P - Turn a rough idea into a complete illustrated comic story - Get a story outline, then full text, then matching panel images - Receive a ready-to-print PDF comic - Reuse and tweak the story without redrawing anything	9. PROBLEM ROOT CAUSE What is the real reason that this problem exists? What is the back story behind the need to do this job? I.e. customers have to do it because of the change in regulations. RC - Making a comic needs writing, drawing and layout skills together - These skills sit with different people, so ideas never become comics - Existing tools cover only one part (text OR image) - Free AI quotas make long stories fail without planning	7. BEHAVIOUR What does your customer do to address the problem and get the job done? I.e. directly related: find the right solar panel installer, calculate usage and benefits; Indirectly associated: customers spend free time on volunteering work (I.e. Greenpeace) BE - Search for comic makers and AI image tools - Copy ideas between a chatbot, an image generator and a layout app - Write short story drafts in notes apps and stop - Indirectly: share webcomics and fan art with friends and online communities	Focus on J&P, tap into BE, understand RC
Focus on J&P, tap into BE, understand RC	3. TRIGGERS What triggers customers to act? I.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. TR - A school project, assignment or story idea needs visuals - Seeing AI-generated art in social media posts - A free weekend with a story idea in mind	10. YOUR SOLUTION If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour. SL ComicCraft: type a story idea and pick the panel count. Gemini Flash writes a structured outline; a second Gemini model expands it into the story with a scene prompt for every panel. Stable Diffusion v1.5 draws each panel (about 12.4 s each on an Apple M5). Panels are laid out in a comic page grid and exported as a downloadable PDF in about 104 s end to end. Quota is split across two Gemini models, so the free tier is enough.	8. CHANNELS of BEHAVIOUR 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7 Web search, YouTube tutorials, AI communities, Reddit/Discord writing groups 8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development. Classroom activities, school clubs, library and storytelling workshops, word of mouth CH	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER How do customers feel when they face a problem or a job and afterwards? I.e. lost, insecure > confident, in control - use it in your communication strategy & design. EM BEFORE: stuck, unsure how to start, discouraged by lack of drawing skill. AFTER: confident and proud: a finished comic they made themselves.
